Geophysical data in H+ database

Geological cross sections, seismic lines (cross section?)

-> spatialized data :

- 2 geographical coordinates (start and end points),
- image file, data file (seg y ...), description file (pdf ...)
- can be linked to an experiment

Surface GPR data

- data file (seg y) + image file
- can be linked to an experiment
- link to a network of points (to be created)

Borehole GPR :

radar imaging (like acoustic imaging or optical imaging)

Drone :

image + data file + description file

ERT on surface

- spatialized data : image file + data file + description file
- can be linked to a network of points (to be created)
- can be linked to an experiment
- measurements in data file or in database ?
